

## **LIQUID CRYSTAL DISPLAY APPARATUS AND METHOD OF FORMING THE SAME**

### **ABSTRACT OF THE DISCLOSURE**

5

A liquid crystal display device including a first substrate, a common electrode formed over the first substrate, and a second substrate disposed opposite the first substrate. A common voltage-applying member applies a common voltage to the common electrode and maintains a cell gap between the first substrate and the second substrate. The common voltage-applying member includes an insulator and a

10

conductor formed over the insulator.
